

International
Scientific Conference

Algebraic and Geometric Methods of Analysis

26-30 may 2020
Odesa, Ukraine

LIST OF TOPICS

- Algebraic methods in geometry
- Differential geometry in the large
- Geometry and topology of differentiable manifolds
- General and algebraic topology
- Dynamical systems and their applications
- Geometric problems in mathematical analysis
- Geometric and topological methods in natural sciences

ORGANIZERS

- Ministry of Education and Science of Ukraine
- Odessa National Academy of Food Technologies
- Institute of Mathematics of the National Academy of Sciences of Ukraine
- Odessa I. I. Mechnikov National University
- Taras Shevchenko National University of Kyiv
- International Geometry Center
- Kyiv Mathematical Society

PROGRAM COMMITTEE

Chairman: Prishlyak A. (<i>Kyiv, Ukraine</i>)	Kiosak V. (<i>Odesa, Ukraine</i>)	Pokas S. (<i>Odesa, Ukraine</i>)
Balan V. (<i>Bucharest, Romania</i>)	Kirillov V. (<i>Odesa, Ukraine</i>)	Polulyakh E. (<i>Kyiv, Ukraine</i>)
Banakh T. (<i>Lviv, Ukraine</i>)	Konovenko N. (<i>Odesa, Ukraine</i>)	Sabitov I. (<i>Moscow, Russia</i>)
Bolotov D. (<i>Kharkiv, Ukraine</i>)	Lyubashenko V. (<i>Kyiv, Ukraine</i>)	Savchenko A. (<i>Kherson, Ukraine</i>)
Borysenko O. (<i>Kharkiv, Ukraine</i>)	Maksymenko S. (<i>Kyiv, Ukraine</i>)	Sergeeva A. (<i>Odesa, Ukraine</i>)
Cherevko Ye. (<i>Odesa, Ukraine</i>)	Matsumoto K. (<i>Yamagata, Japan</i>)	Shelekhov A. (<i>Tver, Russia</i>)
Fedchenko Yu. (<i>Odesa, Ukraine</i>)	Mormul P. (<i>Warsaw, Poland</i>)	Volkov V. (<i>Odesa, Ukraine</i>)
Karlova O. (<i>Chernivtsi, Ukraine</i>)	Mykhailyuik V. (<i>Chernivtsi, Ukraine</i>)	Zarichnyi M. (<i>Lviv, Ukraine</i>)
	Plachta L. (<i>Krakov, Poland</i>)	

ADMINISTRATIVE COMMITTEE

- Egorov B., chairman, rector of the ONAFT;
- Povarova N., deputy chairman, Pro-rector for scientific work of the ONAFT;
- Mardar M., Pro-rector for scientific-pedagogical work and international communications of the ONAFT;
- Fedosov S., Director of the International Cooperation Center of the ONAFT;
- Kotlik S., Director of the P.M. Platonov Educational-scientific institute of computer systems and technologies "Industry 4.0";
- Svytyy I., Dean of the Faculty of Computer Systems and Automation.

ORGANIZING COMMITTEE

Kirillov V.
Konovenko N.
Fedchenko Yu.

Maksymenko S.
Cherevko Ye.

Osadchuk E.
Prus A.

The idea of loess as a natural multi-fractal was formed in the works of Bird [1], Russell [2]. On the basis of the fractal characteristics of the pore and particle structure, there were obtained theoretical models describing diffusion, deformation of the compaction and the shift of the medium [3], [4]. In [2] the distribution function $N_s(L > d_s)$ of the particles sizes is defined as the number of particles of the size L such that $L > d_s$, where d_s runs over the real numbers. The fractal dimension of the particle size distribution function is defined as follows

$$D_s = \lim_{d_s \rightarrow 0} - \frac{\ln(N_s(L > d_s))}{\ln(d_s)}$$

In the presented paper we study subsidence of soils, which are eluvial, eluvial-deluvial loess-like deposits of the Middle-Upper Pleistocene age, lying on the Right-Bank Loess Upland Plain (Middle Dnieper, Ukraine).

On the basis of the fractal characteristics of the pore and particle structure, there were obtained theoretical models describing diffusion, deformation of the compaction and the shift of the medium [3], [4]. Under some additional conditions of fractal nature of the loess soil and developing methods introduced in [5, 6] we obtained certain predictive estimations of the coefficient of porosity after the disintegration of micro-aggregates. In this note we obtain some estimations of soil subsidence volume, based on the introduced above fractal dimension.

The particles forming the ground may have only a finite set of sizes. We denote these sizes $d_1, d_2, \dots, d_{n-1}, d_n$ ranging in decreasing order from the largest. We assume that $\alpha = \alpha_j = d_j/d_{j-1}$, where $2 \leq j \leq n$, does not depend on j . This assumption corresponds to the idea of the self-similarity of fractal structures. In addition, all known mathematical fractals are constructed on this principle. As the structures formed by particles of a fixed size are self-similar, we also assume that all these structures have the same coefficient of porosity k_p as well as the same porosity $K_p = k_p/(1 + k_p)$. We discovered that under such conditions two different situations may occurred. Let k' be the coefficient of porosity and K' be the porosity of the soil after the disintegration of micro-aggregates.

Theorem 1. *In the above denotations we have :*

1. If $K_p > \alpha^{D_s}$, then $k' = \frac{(1+k_p)d_1^{3-D_s}}{\sum_{j=1}^n d_j^{3-D_s}} - 1$ and $K' = 1 - \frac{\sum_{j=1}^n d_j^{3-D_s}}{(1+k_p)d_1^{3-D_s}}$;
2. If $K_p < \alpha^{D_s}$, then $k' = \frac{k_p d_n^{3-D_s}}{\sum_{j=1}^n d_j^{3-D_s}}$ and $K' = \frac{k_p d_n^{3-D_s}}{k_p d_n^{3-D_s} + \sum_{j=1}^n d_j^{3-D_s}}$.

The results of our experiments and calculations show that on the basis of a new theoretical models and the "Microstructure" technique, having the values of the fractal dimension of the particle size distribution by volume, it is possible to forecast the volume deformations after the disintegration of the micro-aggregates. Depending on the type of soils and the specific experimental conditions, this may be the amount of subsidence deformation, swelling or suffusion. The details of our experiments and techniques are described in [6].
